Today's Agenda

PEAK EDGE
CONSULTING

- **Initial Problem**
- **Secondary Research**
- **Primary Research**
- **Reframed Problem Statement**
- **Development Considerations**
- **Deliverables & Approach**
- **Delivery Plan**
- **Costs & Results**

Initial Problem

“How can Alinta better support energy customers facing financial hardship with high energy prices and reduce bill shock using customer channels AND how can the energy industry help everyday Australians with the transition to new energy products and services.”

- **Bill-Shock**
- **Transitioning to renewable energy sources**

Secondary Research

SWOT

STRENGTHS

Established Market Presence:
Electricity & Gas.

S

W

WEAKNESSES

Customer Service Challenges:
Hindering customer retention.

OPPORTUNITIES

Renewable Energy Expansion:
Align with their sustainability
goals and global energy trends .

O

T

THREATS

Regulatory Changes: Strict
policies affect profitability.

Primary Research Analysis

Q. What is your average monthly electricity bill?

Q. Do you often get shocked seeing your energy bill?

Q. Have you thought about switching your energy providers?

Sakshi's Journey Map

Empathy Map

Sakshi's Interview Insights

Behavioural Patterns

- Monitors usage regularly, but tools not actionable enough.
- Explores switching options but struggles to follow through due to time constraints.
- Frustrated by loyalty programs that feel insignificant compared to competitors.

Emotional Impact

- Anxious during colder months due to unexpected high bills.
- Skeptical about energy providers, wonders if she is being overcharged.
- Exhausted balancing work and energy management, leaving little time for proactive decisions.

'Sakshi's experience with energy bills highlights the need for predictability, transparency, and meaningful engagement from energy providers.'

Reframed Problem Statement

"How might we leverage technology to help customers avoid bill-shocks and create tailored solutions that match their energy usage patterns with predictable billing options?"

Development Considerations

Key Organisational Resources

- Digital Infrastructure
- Customer Data Systems
- Customer Support Teams

Key Decision Flows

- Executive Approvals
- Legal and Compliance Oversight
- Cross-Departmental Collaboration

Development Considerations (Contd.)

Stakeholder Alignment

- Internal Stakeholders
- External Stakeholders

Deliverables & Approach

Customer Engagement

- Extensive market research & feedback.
- Customer touch-points.

Loyalty Program

- Rewards-based structure that ties customer behaviour and tenure.
- Learning from existing models and improvising for best results.

Consumption Awareness

- Encouraging energy-efficient behaviour.
- Empowering customers to identify usage through real-time data.

CLV vs CAC

Metric	Formula	Values	Result
Customer Lifetime Value (CLV)	$CLV = \text{Average Annual Revenue per Customer} \times \text{Customer Lifespan (years)}$	Average Annual Revenue per Customer = AUD 1,800	AUD 5,400
		Customer Lifespan = 3 years	
Customer Acquisition Cost (CAC)	$CAC = \text{Total Marketing and Acquisition Spend} \div \text{Number of New Customers Acquired}$	Total Marketing and Acquisition Spend = AUD 277 million	AUD 300
		Number of New Customers Acquired = 100,000 annually	
CLV to CAC Ratio	CLV / CAC Ratio	CLV = AUD 5,400	18:1
		CAC = AUD 300	

- The CLV to CAC ratio of 18:1 shows that Alinta Energy is generating significant value from each customer compared to the cost of acquiring them, indicating very efficient customer acquisition and a strong return on investment.
